

Highway Litter Sampling

Mark Bennett

Addison Cartmell

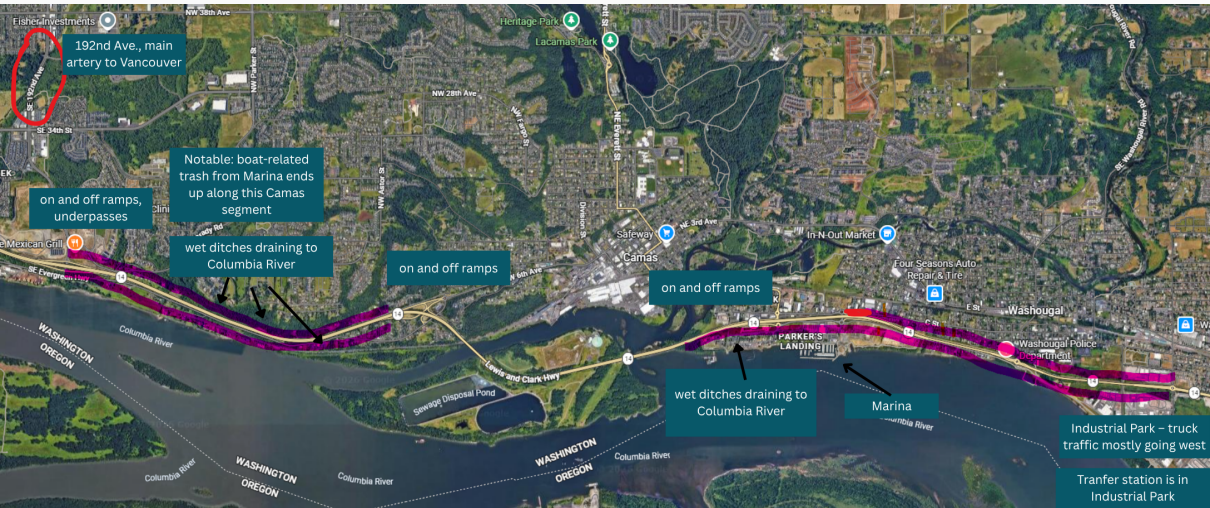

Maddi Gao

Khlood Zamzani

The ECCA wants to study trash on their highway:

- Trash items
- Trash weight

We want to get them a sampling plan.

Plan: Get Sampling Areas

We will choose sampling areas for the ECCA volunteers to clear and subsequently gather data from.

Sampling areas should

- Be representative of both on/off ramp areas and the open road
- Enable comparison to the 2022 Washington Statewide Litter Study

We'll get this to ECCA by April 22nd, our next meeting.

Figure 105. Sample sorting, full sample (left), sub sample (right).

Plan: Generate Measurement Protocol

We will design a measurement protocol for the ECCA volunteers.

This should

- Enable comparison to the 2022 Washington Study
- Be compatible with the EPA's Escaped Trash Assessment Protocol

We'll give ECCA a method to measure trash buildup.

The method will enable comparisons to other data.

Data is useful if it helps address heavy trash buildup;

Data may be used to argue for litter reduction efforts.
